

Running XLSTAT with admin rights under Windows Vista or Windows 7

If you have problems accessing the Excel folder under Windows Vista or Windows 7 with the correct rights, then do the following to run XLSTAT in administrator mode:

- Select the "XLSTAT 2010" icon on your desktop and click the right button of the mouse to display the contextual menu. Then select the "Run as Administrator" option:

- Allow the program xlstatstartvis to run by clicking "Allow":

- You have now started XLSTAT with administrator rights.
