

Updating XLSTAT

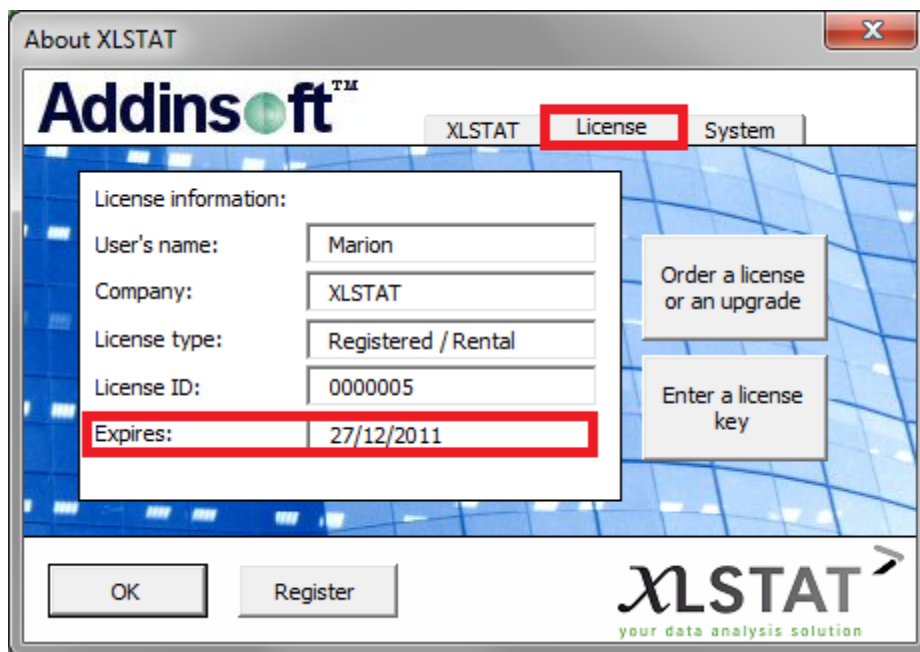

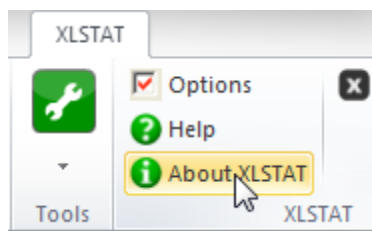

Before updating XLSTAT you need to check the status of your license.

Depending on the validity status you will:

1. update directly if the license is still valid,
2. renew your maintenance agreement if the license is not valid and then update.

Checking the status of your license

To do so you can go to **About XLSTAT** and then to the pane **License**. There, check the expiration date of your license.

Updating when your license is valid

If your license is still valid you can simply download the new XLSTAT from our website http://statisticalinnovations.com/products/xlstat_demo.html and install it. For more information about how to install XLSTAT on Windows click [here](#).

Updating when your license as expired

If your license has expired you need to renew your contract for another year. Please contact Will Barker at will@statisticalinnovations.com
